WHO IT IS FOR

Training for **osteopaths and manual therapists** who wish to broaden their skills in the management of pelvic disorders. Given the breadth of its content, it is structured in **two complementary in-person seminars**.

LEARNING OBJECTIVES

- Discover and improve the **global and local listening** that Jean-Pierre Barral has developed over more than 40 years of practice.
- Improve manual diagnosis.
- Refine precision in visceral and urogenital manipulation.
- Understand and practise the techniques of **induction and viscoelasticity** adapted to visceral, neural and vascular manipulation.

COURSE OVERVIEW

This course takes up and continues all aspects of the urogenital manipulations initiated and developed by **Jean-Pierre Barral** over more than 40 years.

«**Visceral Manipulations for Female Pelvic Disorders**» (Barral Productions, 2020) — Olivier Bazin, Marc Naudin and Jean-Pierre Barral.

«**Manipulations des dysfonctions pelviennes féminines**» (Elsevier Masson · 2nd edition) — Olivier Bazin & Marc Naudin.

Increasingly, many patients come to their osteopath for problems directly related to the pelvic region —urinary disorders, menstrual pain, pudendal neuralgia or fertility difficulties— and look for therapists able to support them.

In addition, many patients whose complaints sometimes seem far removed from the reported symptom in fact have a link with functional dysfunctions of the urogenital region. These dysfunctions can be addressed with the finesse and specificity of the osteopathic manual approach.

The urogenital region is complex: it demands great palpatory finesse and solid anatomical knowledge. The course focuses above all on the **clinical and practical aspect**, in order to establish a manual diagnosis based on palpation, listening and clinical symptoms that guides a treatment protocol.

The content centres on the precise management of male and female pelvic disorders. It presents not only ligamentous manipulations but also advanced **viscoelasticity** techniques and **neural and vascular manipulations**.

SEMINAR 1 · UMPD

October 2–4,
2026

Urogenital Manipulation for Pelvic Disorders

The urogenital region

- Specific features and common reasons for consultation
- Psychosocial impact
- A sensitive area · clinical implications

Bladder dysfunctions — osteopathic approach

- **Anatomy:** the bladder and its environment — suspension and support system, biomechanics, related organs
- **Clinical assessment:** general/local listening, orientation tests, ligamentous tests, test/treatment of the bladder environment
- **Stress urinary incontinence:** definition and circumstances; osteopathic diagnosis; manipulation of the environment; support system (obturator membrane, pelvic floor, pubic symphysis); sacrococcygeal joint; bladder manipulations
- **Enuresis:** definition, clinical aspects, support

Male urogenital disorders

- Prostate review: anatomy, biomechanics, medical/functional pathologies
- Test of the prostate and its environment
- External treatment of the prostate and its environment
- Internal approach to prostate treatment

Female urogenital disorders

- Anatomy/biomechanics of the female urogenital system
- Static/dynamic disorders of the uterus: version, flexion, position, prolapse
- Clinical assessment · test of the uterus and its environment
- Indications and contraindications for treatment
- **External treatment of the uterus and its environment:** small intestine, broad ligament, round ligaments, pubovesical-uterine and uterosacral ligaments
- Internal approach to the uterus: manipulations for the different types of dysfunction

SEMINAR 2 · VMFPD

February 5–7,
2027

Visceral Manipulation for Female Pelvic Disorders

Bladder and ureter (complements)

- Osteopathic approach to cystalgia
- Internal techniques: urethra, trigone, body, ureterovesical junction

Pain syndromes

- Dysmenorrhoea · premenstrual syndrome (PMS)
- Persistent non-mechanical coccydynia
- Manipulation of the filum terminale
- Manipulation of the coccygeal plexus/nerve
- Dyspareunia (superficial/deep)

Neuralgias of the urogenital region

- Nerve biomechanics · palpation and identification
- Neural manipulation
- Pudendal, obturator, cluneal and sciatic neuralgia

Fertility disorders

- Osteopathic treatment protocol for infertility
- Manipulation of the environment · vascular manipulation
- **Structures involved:** fallopian tubes, ovaries and tubo-ovarian junction, uterine cervical ostium, lumbo-ovarian pedicle

Endometriosis

- Definition, symptoms and diagnosis
- Clinical aspects · treatments

Pregnancy and postpartum

- Adaptation of the abdominopelvic viscera to pregnancy
- The gravid uterus: changes and manipulation
- Treatment and advice for the postpartum period

This document summarises the training programme. The practical and clinical content will be detailed during the seminars.
